Phone Cord

1. Connect the Modem

Figure 7 – Back panel of the Modem

Figure 8 – Front panel of the Modem

1. Connect the Modem:

- Position the wireless antenna vertically
- Plug the phone cord (g 6) into the Modem's DSL port (A) and into your wall telephone jack.
- Plug the Modem power supply (g 2) into the Modem's power inlet (C) and into the wall outlet and press power button (D).

2. Wait for the:

- Power (E), DSL (H), Internet (I) and Wireless (G) to turn green. Please note that it may take up to 5 minutes for the DSL and Internet lights to turn solid green.

3. Power Light:

- If the power light turns red during normal usage, power o the modem and wait 10 seconds. Power on the modem. If the issue is not resolved, please call ACN Technical Support at 1-877-226-1010.

2. Connecting your Computer to the Internet

Your wireless modem comes ready to use. Once you have completed the steps from Section 1, "Connect the Modem", you should turn on your computer. If you are using a computer with wireless network capabilities, you should scan for wireless networks using the instructions that came with your computer or wireless adapter. From here, you will see a network named 'ACNBB'. This is your wireless network. Highlight it and click "Connect". Once the connection is made, you may open a browser and begin using the Internet. If the device is working properly, the wireless and Internet lights will quickly ash to show data transmission.

ACN recommends that you set up security measures provided by your modem. At a minimum, you should turn on

3. Set Up Your Email

You can view all your "username@acn.net" email by going to www.acn.net. The screen below will appear. Simply enter your Username and Password and click on 'Go'. You now have instant access to your email!

It's simple, easy to use and accessible from everywhere.

If you are using MS Outlook or MS Outlook Express as your email client, click on Important Downloads and then select the appropriate link and follow the step-by-step instructions. If you are using another email client, click on Google FAQs and then select "How do I con gure my email client" for detailed instructions.

4. Install Filters on Telephone Jacks

Installing phone line lters (g 4) prevents noise interference on the phone line if you are using traditional telephone service. Be sure to install a phone line lter between the wall jack and **every device** you connect to the jack, such as the telephone, fax machine and answering machine.

DO NOT install lters on the modem itself.

1. Unplug the telephone cord from the wall jack.
2. Plug the phone line lter into the wall jack.
3. Plug the end of the telephone cord that you unplugged from the wall into the jack on the lter.
4. Repeat for all telephones that share the same phone number as your ACN High Speed Internet service.

Note: Please ensure there are no lters on the phone cord between the modem and the wall jack, as this will prevent connection to the ACN network.

5. Installing a Splitter

You can use the Splitter (g 3) to connect the modem and the phone to the same wall jack (as shown here). Ensure the modem is connected to the side of the splitter labeled as MODEM.

Have Questions?

Please refer to the DSL Support section on www.acn.net.
